

WASTE PAINT HARDENER™

Quickly Hardens Latex Paints and Water-based Liquids

Get rid of that old latex paint! Dry paint, whether on waste wall board, wood work or any other "painted" material, is disposed of everyday in land-fill sites across North America. Most land-fill sites do not accept latex paint in a liquid form. Using all your paint is the best option but an environmentally safe alternative is now available.

DIRECTIONS:

- 1.) Simply add the crystals to the waste or spilled latex paint or water based ink. One cup of water may be added to thick paint for ease of use.
- 2.) Stir or shake paint can; scrape spilled paint into a pile for about 2-3 minutes or until thick.
- 3.) Dispose of as regular garbage in accordance with local regulations.

USAGE: Up to 2.5 litres per 100g bag

Winner of the Retailers' Choice Award for new products at the 1996 National Hardware Show & Selected by Do-it-Yourself Retailer Magazine as one of 1997's top 100 products..

Goodwood™ Contractors Hint List

WASTE PAINT HARDENER™ is great for quickly containing job site paint spills. Keep a bag in your pocket at all times for the annoying spill that can eat away hours of the day. One bag can thicken and contain a spilled gallon and prevent it from running out of control - Plus you eliminate the need to carry around large quantities of kitty litter or sand.

You can use **WASTE PAINT HARDENER™** to harden all that paint left over from your jobs. Make your waste paint easy to dispose of.

MORE INFORMATION ON PAINT DISPOSAL IS AVAILABLE FROM:
